

FM Ultra Light Struts

Description

The FM Ultra Light Struts are the lightest stabilizing struts on the market, twice as lighter than steel!

FM Ultra Light Strut is made of light aluminium alloy. Applied technical solutions, supported by many years of experience, guarantee simple and intuitive service.

Strong and durable

The strut carries a load of 1000 kg with a safety factor of 1:5.

Specially patented head design

Large contact surface of the strut with the stabilised object regardless of the angle. Special 'teeth' design of the strut's head ensures excellent adherence even to flat surfaces. Allows using a special notch to hold the strut directly against the edges or additionally fasten objects using chains.

Easy adjustable length

Thanks to a special mechanism, it is possible to extend the strut without moving the locking mechanism.

Integrated fastening belt

Integrated fastening belt with hooks allows to fix the strut in any possible configuration for proper stabilisation of objects of various shapes and sizes.

Patented "Slide-Stop" base design

Unique base design makes allows for the strut to self-re-adjust after the stabilised object is lifted during rescue action without losing stability of the whole rescue scene. Base design also ensures good fixing to the ground even in case of insufficient tension of the fastening belts

Technical specification

Length	1100 mm to 1850 mm
Max. load	1000 kg
Belt length	5 m
Weight	7,78 kg only!
