

Quick Stabilisation Tool

Description

Innovative solution for quick and reliable stabilisation of the rescue scene.

High Load

Designed by firefighters for firefighters to quickly stabilise rescue scene. One-hand operation and high maximum load ensures proper stabilisation of heavy weight objects to get quick access to victims.

Adjustable height

Wide range of adjustable height from 100 to 350 mm allows for stabilising of cars of all types and sizes. Device allows the use of wooden plates to extend the range even further.

Safe operation

Device fits entirely under the stabilising car to ensure health & safety of the rescuers better than standard wedges.

Technical specification

Height (folded)	100 mm
Height max	350 mm (650 mm with extenders)
Load max	1000 kg
Weight	13 kg
