

Rescue Tool JAWZ™

ONE-OF-A-KIND TACTICAL RESCUE TOOL FOR SCUBA DIVERS

Engineered from the original LIFELINE® Tactical RESCUE tool with the help of world-class master diver Jeff Hirschman and a local Law Enforcement Emergency Services Unit, JAWZ™ is the only underwater self-rescue tool of its kind. From ice diving to the toughest underwater urban environments, JAWZ™ performed exceptionally well. Its fluorescent handles with military blackout options make it the perfect tool for underwater life saving, low visibility, emergency and survival situations. JAWZ™ comes with the LIFELINE™ sheath whose unique design offers options for various access points and smooth one-handed disengagement without any mechanical manipulation.

GEN 3 JAWZ™ Titanium features signature American Grade 38 ATI 425 Titanium Alloy (which is a high strength, titanium alloy) with new ultra-bright fluorescent phosphorescent handles and sheath for maximum visibility underwater. Innovative design and unique manufacturing process results in a multi-functional solution for search and rescue divers as well as military and survival applications. There is no comparable dive tool like this on the market.

FEATURES & SPECIFICATIONS:

- Co-Developed with various Law Enforcement Emergency Services Units
- 3/16-Inch Thick Grade 38 ATI 425 Titanium Alloy
- Corrosion Resistant Thermo Plastic Sheath With Innovative Single-Handed Release
