

Lightweight & powerful struts for stabilisation of the rescue scene.

KEY FEATURES

Light weight

The UltraLight 2500XL rescue struts are made of light aluminium alloy. They are one of the lightest stabilising struts on the market.

Strong and durable

The strut carries a load of up to 2500 kg.

Intuitive

Designed by firefighters for firefighters supported by many years of experience, simple and intuitive use.

Patented head design

Large contact surface of the strut with the stabilised object regardless of the angle. Special 'teeth' design of the strut's head ensures excellent adherence even to flat surfaces. Allows using a special notch to hold the strut directly against the edges or additionally fasten objects using chains.

Easy adjustable length

Thanks to a specifically designed telescopic mechanism strut can be extended easily and quickly as needed.

Integrated fastening belt

Integrated fastening belt with hooks allows to fix the strut in any possible configuration for proper stabilisation of objects of various shapes and sizes.

Patented Slide-Stop base design

Unique base design makes allows for the strut to self-re-adjust after the stabilised object is lifted during rescue action without losing stability of the whole rescue scene. Base design also ensures good fixing to the ground even in case of insufficient tension of the fastening belts.

TECHNICAL DATA

Length	1500 mm to 2500 mm
Max Load	2500 kg per strut
Weight	10,3 kg
Slide-Stop Base	Operational angle 170°
Head	Operational angle 90°
