

Spine Boards

Total spinal protection with reliable handling and rapid transfer

Spine Boards deliver secure immobilisation and controlled transport for trauma and emergency care: designed for professional rescue and pre-hospital teams: durable, easy to handle, and ready for full-system use with stabilisers and straps.

- **Marine-grade phenolic plywood construction** → high strength and water resistance
- **Radiotransparent structure** → allows X-ray diagnostics without removing the patient
- **Buoyant design** → suitable for water rescue operations
- **Polyurethane protective coating** → improves durability and service life
- **Multiple grip openings** → secure handling during transport and rescue
- **Vertical and horizontal rescue capability** → suitable for complex evacuation scenarios
- **Compatible with immobilisers, collars and rescue straps** → integrates easily into rescue systems
