

Forcible Entry Door Trainer

Realistic breaching training for rescue and tactical teams.

The Forcible Entry Door Trainer is a modular simulator for realistic breaching training. Its reinforced steel frame and replaceable locking pins replicate secured doors, while dedicated stations enable practice in padlock breaking, lock drilling and metal cutting for rescue and tactical teams.

- **Reinforced welded steel frame** → simulates a full-scale door structure for realistic training
- **Replaceable locking pins with adjustable resistance** → adaptable difficulty for different training levels
- **Multiple breaching stations** → practice padlock breaking, lock drilling and tool techniques
- **Integrated metal cutting station** → training on wires, steel rods and small pipes
- **Modular training structure** → supports multiple forced-entry scenarios in one system
- **Configurable door installation** → left- or right-hand opening setup
- **Transport wheels and levelling feet** → easy positioning with stable operation
